

**AMENDMENTS TO THE ABSTRACT**

Please substitute the following substitute abstract for the abstract currently on file:

A liquid crystal display device includes an image display part formed on a first substrate a plurality of gate tape carrier packages having a gate driving integrated circuit for driving gate lines, a plurality of data tape carrier packages having a data driving integrated circuit for driving the data lines, a first control signal line formed together with conductive lines to supply a first control signal to the gate driving integrated circuits to sequentially drive the gate lines of the image display part, a second control signal line formed together with the conductive lines to supply a second control signal to the gate driving integrated circuits to sequentially drive the gate lines of the image display part, and a first controller for supplying the first and second control signals to the first and second control signal lines.
